

Press Release

# Aggreko

*“This has been one of the best managed and most successful projects we've handled. The project went live for Europe in March 2010 and we are planning to roll it out for North America and the Middle East through 2010-11.” Stephen Henry, Head of PMO, Aggreko*

**Aggreko plc**, the global leader in temporary power and temperature control solutions, has selected **Basware** for its invoice processing in a new contract announced today.

The deal has seen the **Basware** solution deployed across Aggreko's Northern Europe and Continental Europe divisions, with leading IT consultancy firm **nSYS** implementing the solution and providing integration across the Aggreko group network. Front end invoice capture and scanning is performed using **Kofax** software, which initially will scan around 200,000 documents per year for the firm.

With 133 locations in over 50 countries, Aggreko deals with thousands of different customers and suppliers every year, with invoices incorporating multiple languages and currencies. Between the two divisions Aggreko processes around 85,000 supplier invoices per annum.

Unsurprisingly, efficiency, clarity and simplicity were the main drivers behind Aggreko's adoption of **Basware**, along with proven integration with the firm's Movex global ERP system.

The firm's **European Financial Director Dan Ibbetson** was delighted with the implementation. "It was vitally important for us that we were able to achieve some real results from this implementation before we went ahead with it," says Ibbetson. "As we outlined the project, and discussed the deliverables, it quickly became clear that **Basware** and **nSYS** were able to put in place an efficient system that gave us visibility of all of our financial transactions across the business, which is fundamentally important to us. Aggreko prides itself on inspiring confidence in its customers, and the internal confidence that comes from this kind of accountability goes a long way towards that."

Aggreko is also set to make good use of **Basware's KPI** reporting tool to help achieve the necessary visibility of results. Processing such a large number of supplier invoices will require in-depth analysis to ensure efficiency in the purchase-to-pay process. **Basware's KPI** reporting tool will examine Aggreko's key data to identify potential bottlenecks in the system, help achieve key strategic goals and create a cycle of continuous improvement.

**nSYS Managing Director, Julian Keating**, says: "We're absolutely thrilled to have delivered this solution to Aggreko. Aggreko is a major name worldwide, and we're delighted to be working with the company as it continues to expand into new territories. We look forward to continue helping Aggreko to save time and money, and working hard to ensure that they begin to see ROI right from day one."

## About nSYS Services Ltd

**At nSYS we are a dedicated and experienced team of business analysts and software specialists, who work closely with our clients to help them improve their business processes, which in turn increases efficiency and reduces costs.**

**We have built close working relationships with key software suppliers and we configure and integrate their solutions into our clients systems to automate and streamline their business processes.**

Our services include Enterprise Purchase to Pay, Scan and Capture, Professional Services Automation, Enterprise Resource Planning, Training and Consultancy
